PRESS RELEASE CES 2013

Absolute Technology is excited to launch:

LINKASE

- the WIFI signal enhancing protective cover for iPhone5.

LINKASE comes equipped with our latest technology: EMW (Electromagnetic waveguide), which is incorporated into the sliding mechanism of the case. It is designed to resonate with your mobile devices' antenna to provide seriously improved signal performance!

With every detail carefully measured and considered, LINKASE wraps around your phone seamlessly while staying slim and elegant. You can also create your own color combinations with the interchangeable EMW elements. Each case comes with an additional color to start your collection.

Currently available in 5 different colors: Coal black, Ash gray, Frost white, Chili red and Antarctic blue.

Enjoy a significantly enhanced WIFI signal simply by sliding out your EMW element.
